Dear Colleagues

Please find attached a published paper that suggests that PFOA exposure sources other than drinking water (see Table 5 on page 23). In fact, these study authors question the estimates of long half-life in humans from other studies (see pages 12 and 23). This would be important if the current OW position did not consider these other sources in the determination of a data-derived uncertainty factor for kinetic variability between experimental animals and humans.

I would be more than happy to have this sent over to OW prior to their briefing.

Cheers!

Michael...
